

**GEOLOGIC MAP OF THE DRIGGS QUADRANGLE,
IDAHO**
compiled by
Victoria E. Mitchell and Earl H. Bennett

1979

assisted by
Gail S. Hustedde
Julie A. Copeland

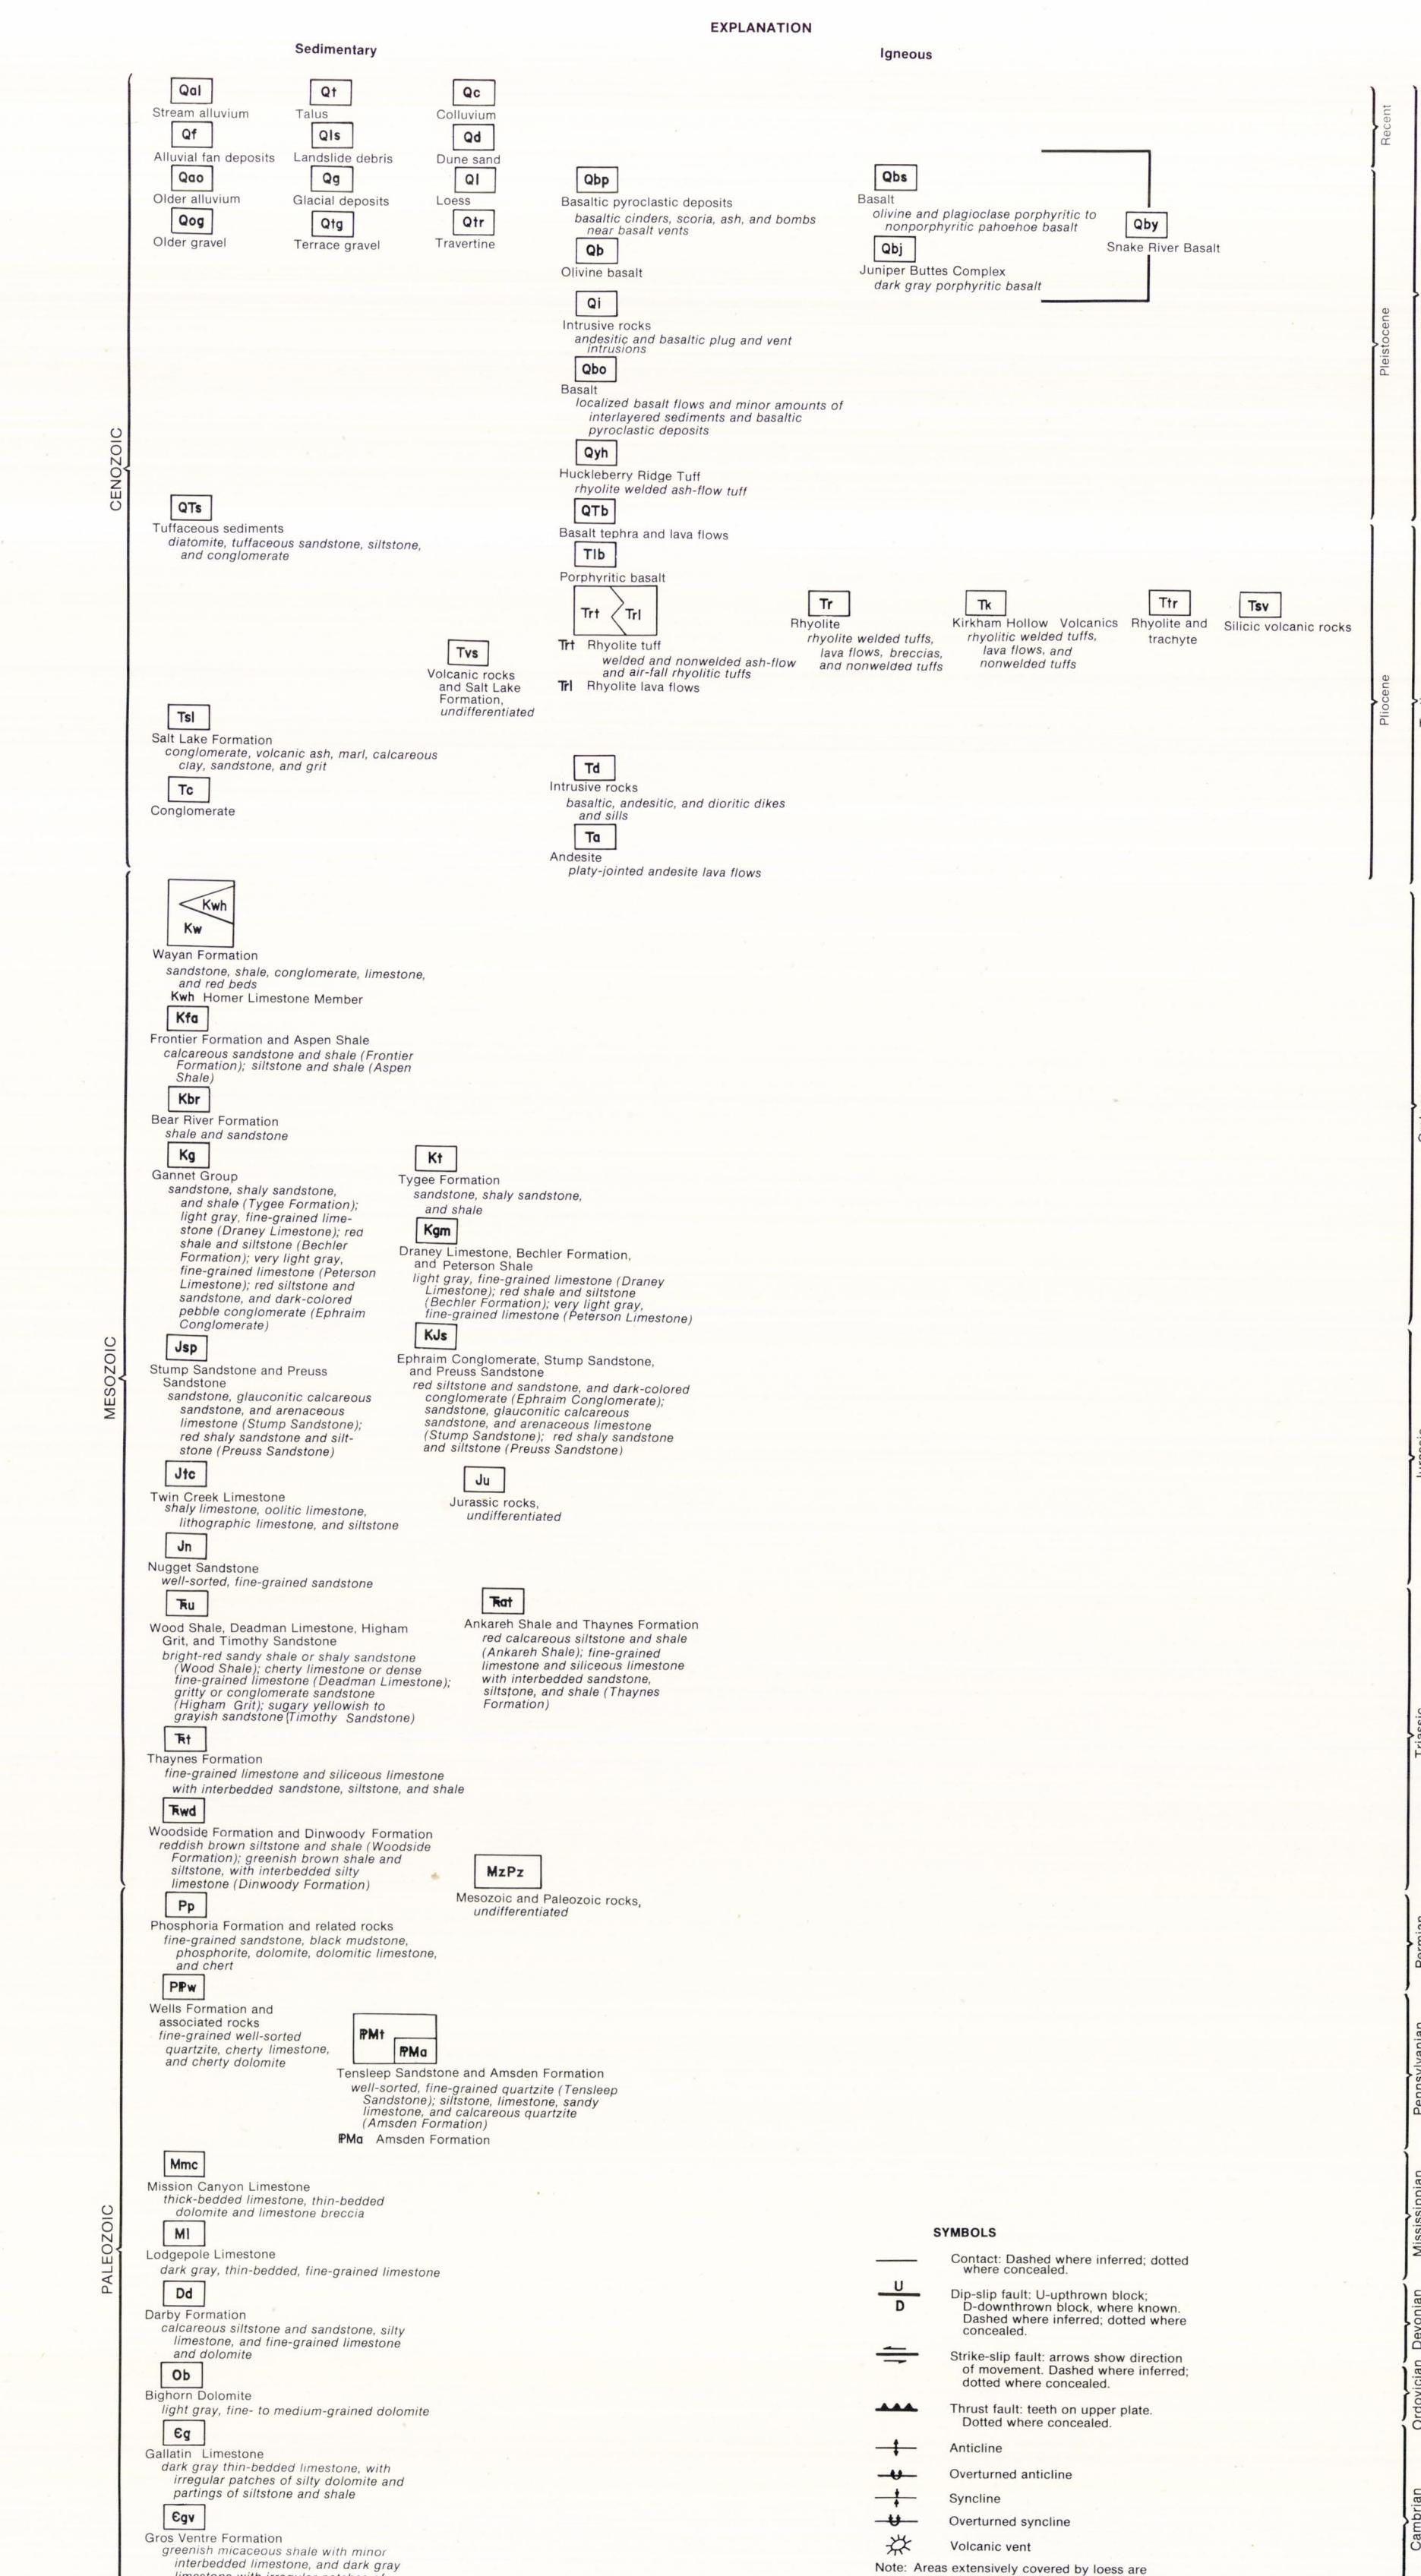

1955 magnetic declination from true north varies from 16°45' eastward for the center of the west edge to 16°45' eastward for the center of the east edge.

Index to 1:250,000-scale maps by USGS

The Geologic Map Series (2° Quadrangle) by the Idaho Bureau of Mines and Geology consists of geologic compilations from the best sources available. These compilations are not intended to be finished geological maps, but they do provide the most current data available. Some maps are published. Stratigraphic correlations, contact and structural continuity, and general map interpretation are the responsibility of the compilers. Some information has been modified using aerial photography. This project was partially funded through a contract with the U.S. Department of Energy (Bendix Corporation, prime contractor).
