Index to References

1960 magnetic declination from true north varies from 17°45' easterly for the center of the west edge to 17°15' easterly for the center of the east edge.

Index to 1:250,000 scale maps by USGS.

The *Geologic Map Series (2° Quadrangle)* by the Idaho Bureau of Mines and Geology consists of geologic compilations from the best sources available. These compilations are not intended to be finished geologic maps, but they should prove useful until such maps are published. Stratigraphic correlations, contact and structural continuity, and general map interpretation are the responsibility of the compilers. Some information has been modified using aerial photography. This project was partially funded through a contract with the U. S. Department of Energy (Bendix Corporation, prime contractor).
