

GEOLOGIC MAP OF THE PULLMAN QUADRANGLE, IDAHO

compiled by

William C. Rember and Earl H. Bennett

1979

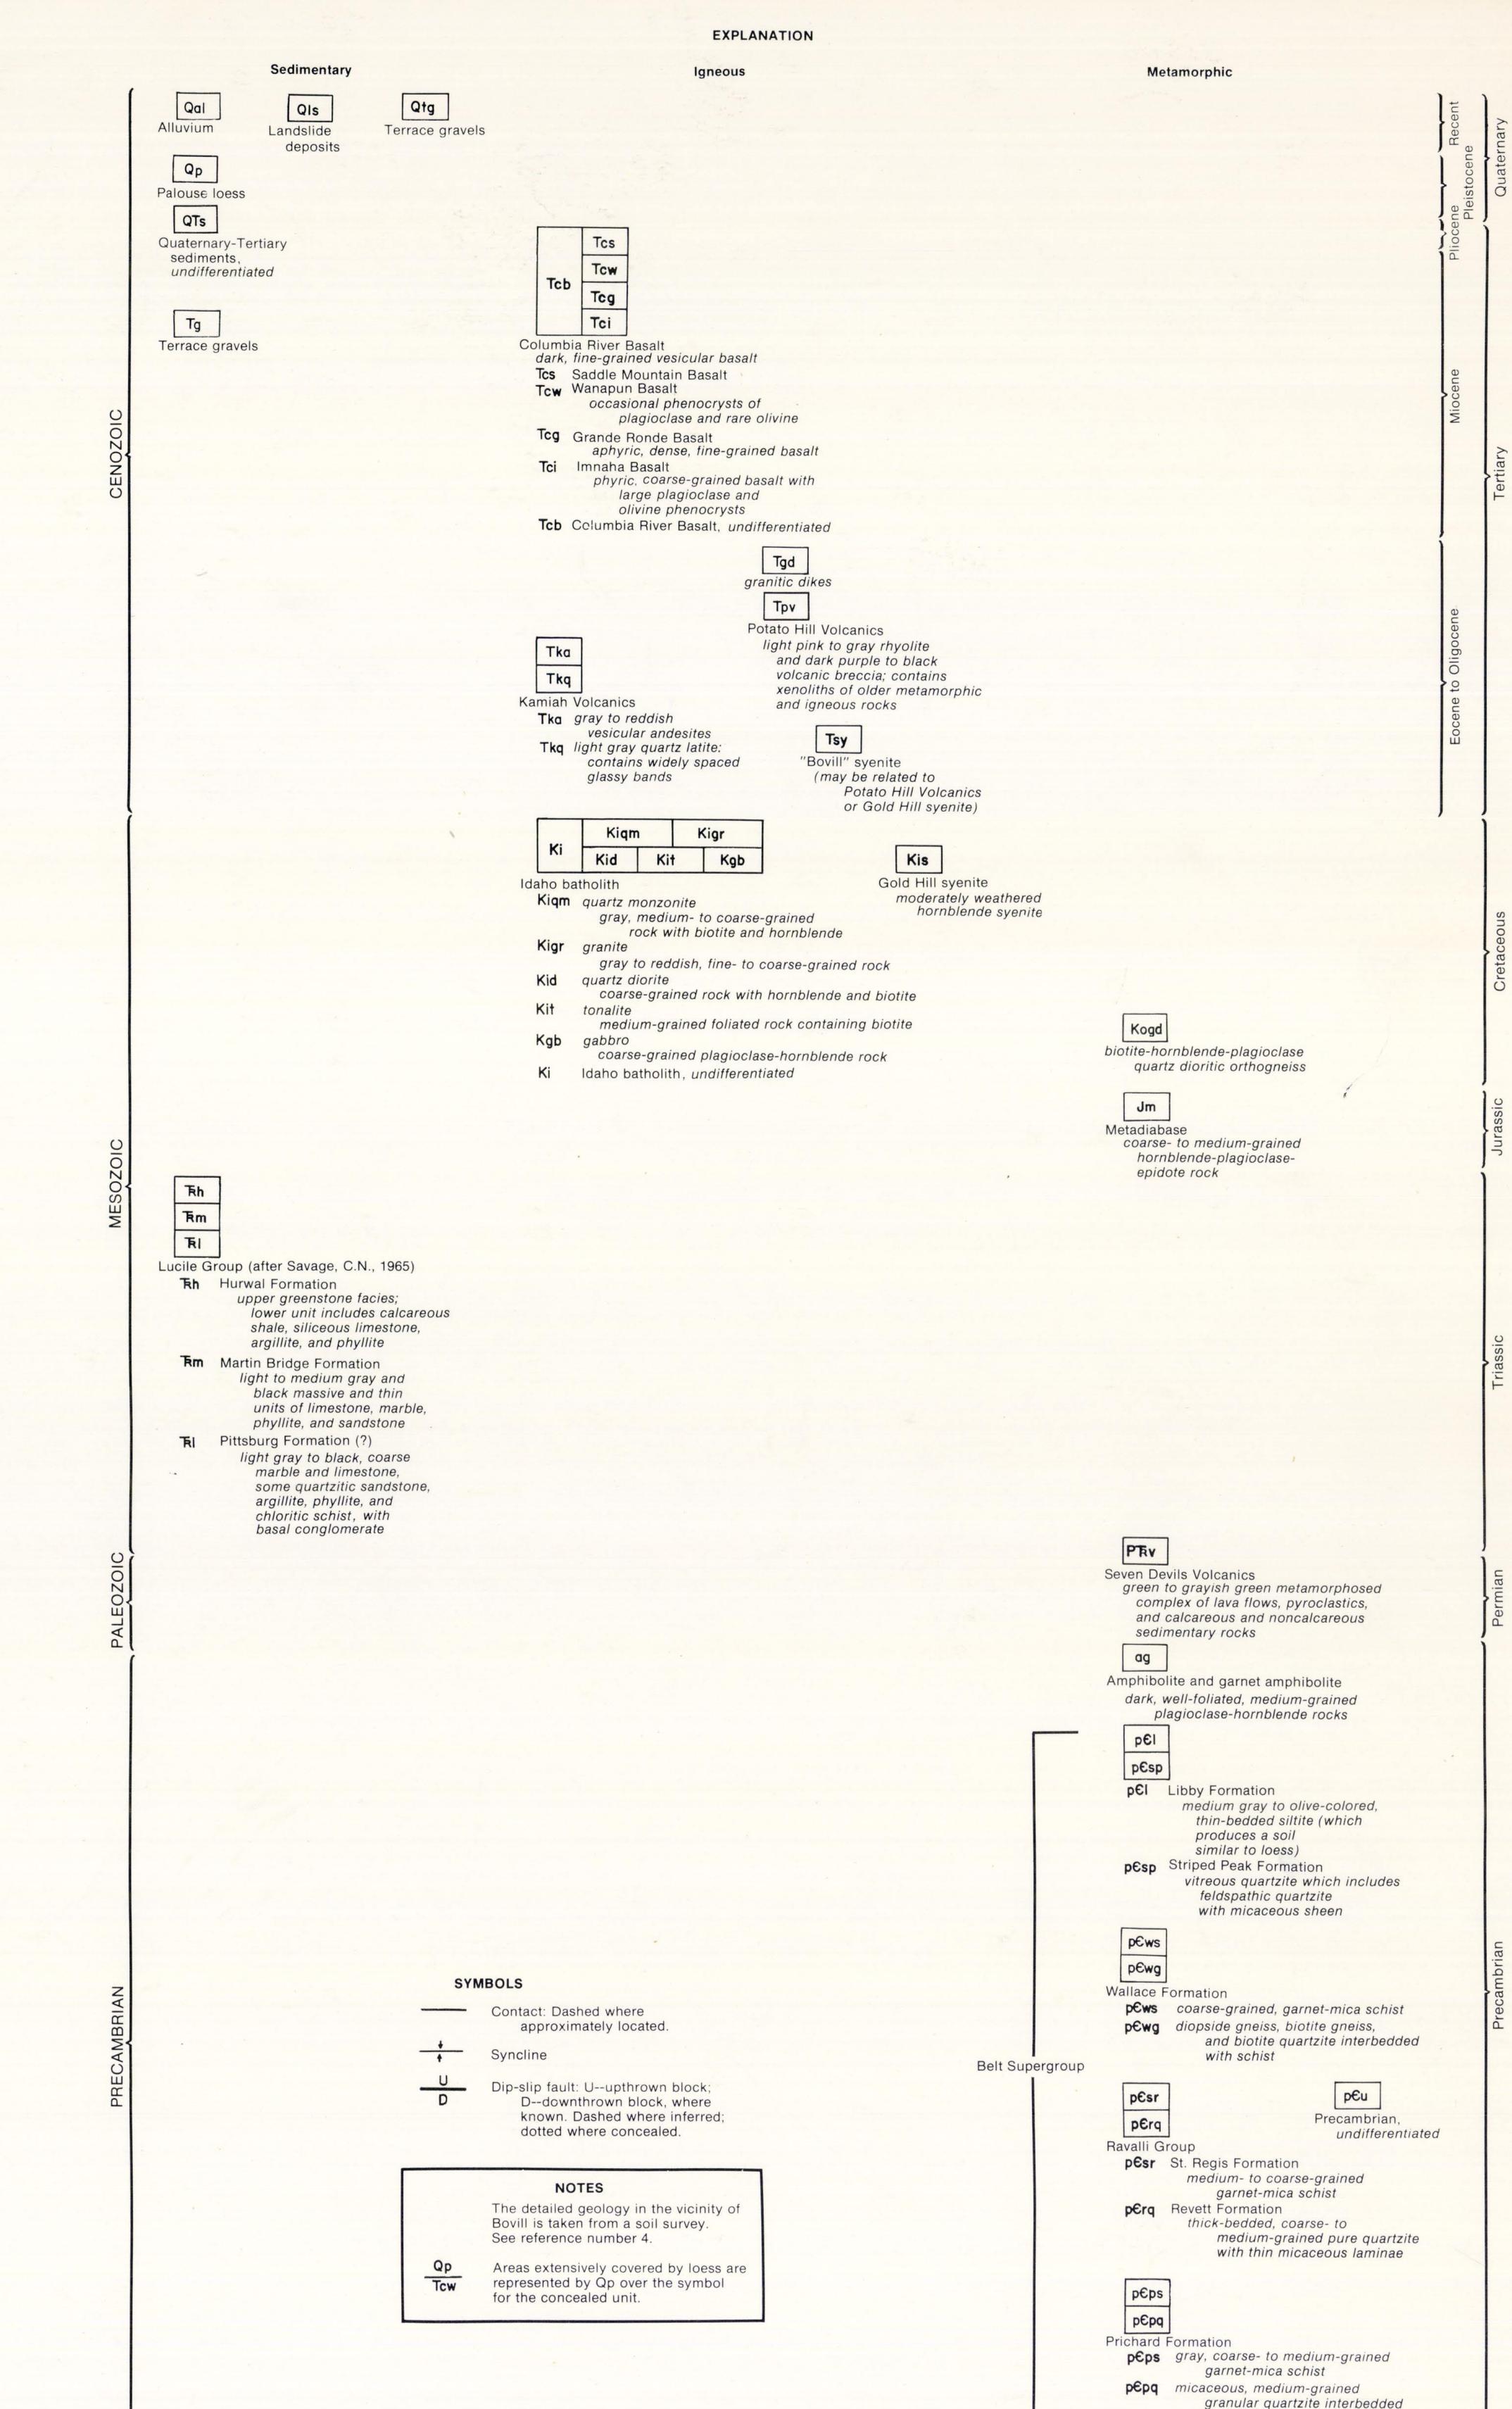

assisted by
Victoria E. Mitchell
Gail S. Hustede

1960 magnetic declination from true north varies from 20°30' easterly for the center of the west edge to 19°45' easterly for the center of the east edge.

Index to 1:250,000-scale maps by USGS.

The Geologic Map Series (2° Quadrangle) by the Idaho Bureau of Mines and Geology consists of geologic compilations from the best sources available. These compilations are not intended to be finished geologic maps; they should serve as useful tools such that they can be used for mapping correlations, contact and structural continuity, and general map interpretation are the responsibility of the compilers. Some information has been modified using aerial photography. This project was partially funded through a contract with the U.S. Department of Energy (Bendix Corporation, prime contractor).
