The map is the result of research and field work in 2013 and 2014, and planning and development by the authors. The map is intended for geologists, hydrologists, ecologists, and others who are interested in the geology of the North Fork Quadrangle. The map shows the geology of the area, including the distribution of rock types, faults, and other geologic features. The map also includes a legend that explains the symbols used on the map. The map is a valuable tool for understanding the geology of the area and for planning and implementing projects that involve the land.
