INTRODUCTION

The geologic map of the Hagerman quadrangle identifies the history and evolution of the area, showing the geologic development of the region. The map is used for research and development in tourism and other economic activities. The map also aids in the management of natural resources.

DESCRIPTION OF MAP UNITS

ALLUVIAL AND GLACIATED DEPOSITIONS

1. Made ground (Holocene)

2. Older alluvium of Big Wood River (Holocene or Pleistocene)

3. Flood-scoured surface with made ground and alluvium.
