INTRODUCTION
The Tuttle Quadrangle geologic map depicts the distribution of geologic units in Gooding and Twin Falls Counties, Idaho. The map includes a variety of geologic units, such as basalt, alluvium, and eolian deposits. The map was created through a combination of field investigations and existing geologic data. The map reflects the updated understanding of the geology of the area as of 2005.

DESCRIPTION OF MAP UNITS
Alluvial Deposits
- Basalt of Flat Top Butte (Pleistocene)
- Basalt of McKinney Butte (Pleistocene)
- Basalt of Notch Butte (Pleistocene)

ARTIFICIAL DEPOSITS
- Banks of rivers, creeks, and ditches
- Sites of flooding and damming of the Snake River
