Summary

Digital geologic map data (GIS database) of the Geologic Map of the Stibnite Quadrangle, Valley County Idaho. Idaho Geological Survey Geologic Map 51, intended for non-site-specific investigations. The Geodatabase data set: StibniteGeology_GM-51.

Description

These data were created mostly from original field work at 1:24,000 scale with some compiling from existing geologic map data at scales of from 1:24,000 scale or larger. Data source is the IGS publication GM-51, Geologic Map of the Stibnite Quadrangle, Valley County Idaho, 2016. This GIS data set is approximately compliant with the draft standard for publication of digital geologic maps (NCGMP09). All Feature Classes can be linked to the DataSources table via DataSourcesID field/attribute to determine the geologic source and scale for the data. Feature classes included with dataset:

MapUnitCentroids--Map unit polygon annotations (Labels).

CartographicLines--Line decorations for various polyline feature classes, e.g., tics for landslide scarps.

Contacts--Geologic map unit boundaries. Contacts only, no dangler faults. Used to build map unit polygons. Use the "type" field to classify contact type or to link to the Glossary. This

Feature Class is not part of the NCGMP09 standard.

ContactsAndFaults--Geologic map unit boundaries and ALL faults included. This includes dangler fault lines. Used to build map unit polygons. Use the "type" field to classify contact type or to link to the Glossary. Use the "FaultMovement" field to classify fault type or to link to the Glossary.

Faults--Geologic faults. Includes all faults; both dangler faults and contact -faults. Use the "FaultMovement" field to classify fault type or to link to the Glossary. This Feature Class is not part of the NCGMP09 standard.

Dikes--Geologic dikes (lines too small to map as polygons). Use the mapunit field to classify or to link to the DescriptionOfMapUnits table. This Feature Class is not part of the NCGMP09 standard. Geologic Points--Geologic Point features showing located geologic (point) objects, e.g., fault breccia, non-oriented structure symbols. Use the "Type" field to classify by type and to link to Glossary if desired.

Orientations Points--Orientation Point data. Includes strike and dip and foliations measurements. Use the "type" field to classify or to link to the Glossary.

GeologicLines--Polylines depicting geologic mapped features, e.g., landslide headwall scarps, terraces scarps, axial fold traces, or avalanche trace. Use the "type" field to classify or to link to the Glossary.

GeologicPoints--Features showing located geologic (point) objects, e.g., fault breccia, non-oriented structure symbols. Use the "Type" field to classify by type and to link to Glossary if desired.

MapUnitPolygons--Geologic map units polygons. These are the main features of this dataset. Descriptions for these units can be found in the DescriptionOfMapUnits feature class/table. Link via the "MapUnit" field.

Non Spatial data tables:DescriptionOfMapUnits--Table with map unit descriptions. Use MapUnit field to link to MapUnitPolygons or Dikes.

Glossary--Look up table with explanations for geologic features found in all Feature Classes. For example, moraine_crest: Definition--glacial moraine ridge crest. Features in feature classes can be link to Glossary via "Type" in feature class to "IGSGeoType" in Glossary.

DataSources--Sources of geologic mapping. Link via DataSourceID in feature class to DataSources_ID in Sources.

DataDictionary--Field/attribute descriptions for fields in all Feature Classes and non-spatial tables in this data set.

Credits

Science data credit: David E. Stewart, Eric D. Stewart, Reed S. Lewis, Kerrie N. Weppner, and Vincent H. Isakson.

GIS credit: Loudon R. Stanford, William R. Schuster, and Jane S. Freed.

Use limitations

Geologic map data intended for non-site-specific use. These data were compiled from 1:24,000 scale geologic mapping and should not be used at larger scales, e.g., 1:12,000 scale. Use the DataSources table and the DataSourceID in each Feature Class to determine original intended scale. The Idaho Geological Survey does not guarantee this map or digital data to be free of errors nor assume liability for interpretations made from this map or digital data, or decisions based thereon.

SCOPE OF QUALITY INFORMATION ►

RESOURCE LEVEL dataset

[Hide Scope of quality information ▲](#)

DATA QUALITY REPORT - CONCEPTUAL CONSISTENCY ►

MEASURE DESCRIPTION

Horizontal accuracy is difficult to quantify in geologic mapping of this type. User should use original map scale (linked to DataSourcees table in this data set via "DataSource_ID" to determine relative accuracy of groups of map objects in the data set. ---EXAMPLE OF DETERMINING H ACCURACY: 1:24k map objects in the data set have a placement h-accuracy => 80(+/-) feet (.04 inch x 2000 ft/inch @1:24,000) for a CERTAIN line type. Accuracy is proportionally less for smaller scales and even less for other line types (see "AuthorConfidence" field in each data layer/feature class). Map data used in compilation was visually compared to original for horizontal accuracy.

EVALUATION METHOD

Geologic map data are visually checked against original map data for completeness. Accuracy is determined by at least two factors: quality of capture (digitizing) consistency and the quality of the original geology. The quality of the original geology is by far the most important for determining the quality of attribute accuracy. Use scale for each geologic data source to determine relative accuracy of line work. Use the DataSourceID linked to the DataSourcees Table to find scale.

[Hide Data quality report - Conceptual consistency ▲](#)

[Hide Data Quality ▲](#)

Lineage ►

LINEAGE STATEMENT

These data were created mostly from original field work at 1:24,000 scale with some compiling from existing geologic map data at other scales. Data source is the IGS publication Geologic Map of the Stibnite Quadrangle, Valley County Idaho. Idaho Geological Survey Geologic Map 51, 2016.

Data sources are stored in the DataSourceID field for each Feature Class in the data set. References for these attributes are stored in the DataSourcees table in the data set. Information about authorship, data type, scale, and more can be found in this table.
