Middle marble (Ordovician to Cambrian)

INTRODUCTION

The Stibnite Mining Area is located in Valley County, Idaho, and is characterized by a complex geology that includes a variety of rock types and structures. The area is known for its rich mineral deposits, including gold, silver, and other precious metals.

SURFACE FEATURES

The surface features of the Stibnite Mining Area include a variety of topographic lines generated based on lidar data. These lines were created using ArcGIS software and are courtesy of Midas Gold Corp. Flown in 2011.

LIDAR DATA BASE

The lidar data base was used to create a digital cartography of the area, with a strike of vertical bedding. The data was compiled by the U.S. Geological Survey (USGS) and is available online (Wintzer, 2022a).
